

Job Description

MetaWireless Early Stage Researchers

Division of Decision and Control Systems, School of Electrical Engineering and Computer Science

KTH Royal Institute of Technology, Stockholm, Sweden

The Division of Decision and Control Systems, KTH Royal Institute of Technology, Stockholm, Sweden, is seeking to appoint one high-calibre Early Stage Researcher (ESRs) to join the Marie Skłodowska-Curie Innovative Training Network on ‘**Future Wireless Communications Empowered by Reconfigurable Intelligent Meta-Surfaces**’ (MetaWireless).

Position	Early Stage Researcher - KTH-1 : Algorithms for channel estimation and low-feedback overhead in RIS-based wireless networks (RIS = reconfigurable intelligent surfaces)
Location:	Division of Decision and Control Systems, School of Electrical Engineering and Computer Science, KTH Royal Institute of Technology, Malvinas väg 10, 100 44 Stockholm, Sweden.
Working time:	Full Time
Duration:	Fixed-Term (3 years)
Living, mobility, family, and research allowances:	In agreement with the MSCA-ITN financial regulations (http://ec.europa.eu/research/participants/data/ref/h2020/other/guides_for_applicants/h2020-guide-appl-msca-itn_en.pdf - Section 5, page 27)

About MetaWireless

Wireless connectivity has become a pillar of our society. The growth of wireless traffic is relentless, forecast to reach a staggering worldwide aggregate of 5,016 exabytes by 2030, along with bit rates of 1 Tb/s and new services related to sensing, localization, low-latency, and ultra-reliability. While the performance of wireless networks has improved phenomenally over the last decades, progress is by now pushing against fundamental limits and the mechanisms that have sustained these huge improvements are starting to falter. New evolutionary leaps are called for in order to ensure that the aforementioned forecasts can become a reality. To date, every wireless system has abided by the premise that the propagation radio channel is fixed by nature and cannot be tampered with, but only compensated through ever more sophisticated transmission/reception schemes. A potential evolutionary leap for 6G-and-beyond networks is to break free from the postulate that channels are uncontrollable factors. Serving such a vision, MetaWireless pursues the disruptive idea of designing wireless networks by treating the environment itself as a quantity to be controlled and optimized. Precisely, the manipulation of the wireless environment can be made possible by incorporating reconfigurable intelligent surfaces. These are planar structures, made of meta-materials and electromagnetically discontinuous, which do not adhere to conventional reflection and diffraction laws; rather, they can modify in a controllable fashion the phase and wavefront of impinging radio waves. If deployed to coat objects, walls, or building facades, they could allow customizing in real time the electromagnetic response of environments. Making this vision a reality requires the training of a new generation of researchers and a multidisciplinary effort involving wireless communications, physics, electromagnetic theory, and computational learning, which are the ingredients that define the MetaWireless project.

The Role

KTH-1 will be hosted by the Division of Decision and Control Systems, School of Electrical Engineering and Computer Science, KTH Royal Institute of Technology, Stockholm, Sweden. The ESR will be enrolled on the PhD programme of KTH Stockholm Campus, Sweden and will write his/her thesis on a topic related to “Algorithms for channel estimation and low-feedback overhead in RIS-based wireless networks”, under the supervision of Dr. Gabor Fodor and co-supervisor Dr. Emil Björnson for the entire duration of his/her Ph.D. programme. KTH-1 will benefit, in addition, of a period at another partner of the MetaWireless project.

Further information about this Ph.D. project can be found in the following table.

Position: KTH-1
Title: Algorithms for channel estimation and low-feedback overhead in RIS-based wireless networks.
Scientific context: Traditional pilot-based channel estimation methods are not applicable to RIS-empowered wireless networks because RISs are massively deployed to customize the propagation environment, and so, they would require unfeasible complexity and overhead. Also, RISs are nearly passive structures that are not equipped with power amplifiers and signal processing capabilities, i.e., they cannot receive, transmit, and process pilot. To overcome this gap, this ESR project is focused on developing low-overhead channel estimation algorithms and feedback signaling mechanisms, where end-to-end channel estimation is performed only at the transmitters and receivers without requiring any signal processing and transmission at the RISs. The approach will consist of leveraging the tool of bilinear generalized approximate message passing for sparse matrix factorization and the Riemannian manifold gradient-based algorithm for matrix completion, in order to reduce the amount of samples and avoid any local processing at the RISs..
Objectives: Develop algorithms for scalable channel estimation algorithms that can be deployed in RIS-based wireless networks.
Expected results: Algorithms and associated performance analyses that are deployable in future cellular wireless networks.
Acquire knowledge: Estimation theory, algorithm design and performance analysis skills, which are especially applicable for the design and analysis of wireless networks.
Planned secondment(s): Telefonica (Spain) for 6 months.
Ph.D. enrolment: KTH Royal Institute of Technology (Sweden).

Duties and Responsibilities

1. Undertake postgraduate research in support of the agreed doctoral research project.
2. Work closely with the academic supervisor (Dr. Fodor) and academic co-supervisor (Dr. Björnson) to ensure the compatibility of the individual project with the overall goals of MetaWireless.
3. Present and publish research in both academic and non-academic audiences.
4. Attend and participate to academic and non-academic conferences, events and seminars.
5. Attend and participate to all training events and supervisory meetings.
6. Be seconded to other network partners as necessary to fulfil the grant obligations.
7. Prepare progress reports and similar documents on research for funding bodies, as required.
8. Contribute to the delivery and management of the wider programme, including attending and participating in programme committee meetings.
9. Actively contribute to the public engagement and outreach activities as described in the grant agreement.

As job descriptions cannot be exhaustive, the ESR may be required to undertake other duties, which are broadly in line with the above duties and responsibilities.

Person Specification

1. An undergraduate degree and a postgraduate Master's degree (or equivalent) in electronic or electrical engineering, mathematics, electromagnetics, or a physical sciences subject.
2. Excellent mathematical skills and background, with special emphasis on linear algebra and probability theory.
3. High proficiency in Matlab, Mathematica, Maple, R, or similar programming software. Mathematica knowledge and interest in learning Mathematica are meritable.
4. Solid background on wireless communications (antennas, propagation, stochastic geometry is a plus).
5. Excellent written and verbal communication, including presentation skills.
6. Highly proficient English language skills.
7. Excellent organisational skills, attention to detail and the ability to meet deadlines.
8. Ability to think logically, create solutions and make informed decisions.
9. Willingness to work collaboratively in a research environment.
10. A strong commitment to his/her own continuous professional development.
11. Willingness to travel and work across Europe.

Eligibility Requirements

All candidates must meet the following requirements to be considered for this post:

- a) Early-Stage Researchers (ESRs) shall at the time of recruitment by the host organisation be in the first four years (full-time equivalent research experience) of their research careers and not yet have been awarded a doctoral degree. Full-time equivalent research experience is measured from the date when a researcher obtained the degree which would formally entitle him or her to embark on a doctorate, either in the country in which the degree was obtained or in the country in which the researcher is recruited.
- b) At the time of recruitment by the host organisation, ESRs must not have resided or carried out their main activity (work, studies, etc.) in the country of their host organisation for more than 12 months in the three years immediately prior to the recruitment date. Compulsory national service and/or short stays such as holidays are not taken into account.

How to Apply

Applications must be submitted, to the attention of Dr. Gabor Fodor, according to the following procedure:

- 1) Registration and submission of the application material to the MetaWireless recruitment website (<https://kth.varbi.com/en/what:job/jobID:380980/>)

Informal enquires for further information about the positions can be sent to Dr. Gabor Fodor (gaborf@kth.se).

Note 1: Registrations and submissions need to be done to both websites.

Note 2: By registering on either of the two websites mentioned above, the applicants agree that all members of the MetaWireless project can access their personal data and application material.

Each application must include the following material:

- a) A cover letter explaining the motivation for applying for the post.
- b) A curriculum vitae setting out the educational qualifications as well as any additional scientific achievements and publications.
- c) Evidence of English proficiency.
- d) Copy of Bachelor's and Master's certificates.
- e) Copy of Bachelor's and Master's transcripts.

f) Any additional material useful for the assessment of the candidate (e.g., recommendation letters, research project/statement in agreement with the requirements specified in previous text).

Selection Process

The selection and recruitment processes of the ESRs will be in accordance with the European Charter and Code of Conduct for the Recruitment of Researchers. The recruitment process will be open, transparent, impartial, equitable, and merit-based. There will be no overt/covert discrimination based on race, gender, sexual orientation, religion or belief, disability or age. To this end, the following selection criteria for the recruitment of the ESRs will be considered:

- 1) Curriculum vitae
- 2) Academic performance (diplomas, university transcripts, etc.)
- 3) Research and industrial experience
- 4) Awards and fellowships
- 5) Publications and patents
- 6) Research, leadership, and creativity potential
- 7) English knowledge
- 8) Other relevant items based on the specific candidate

The recruitment process will adhere to the guidelines described in the Grant Agreement of the MetaWireless project. At the network's level, the recruitment will be coordinated by the Recruitment Committee of the project in order to guarantee gender- and sector-balance. At the KTH Royal Institute of Technology level, the recruitment will be coordinated by the hosting School (School of Electrical Engineering and Computer Science, EECS). More precisely, the recruitment and selection of the ESRs will be executed by the Scientist-in-Charge of the MetaWireless project for KTH (Dr. Gabor Fodor) and by at least another research scientist of the School of EECS. The entire process will be overseen and approved by the Director of Doctoral Studies at the School of EECS and by the Responsible of the Human Resources of the School of EECS.

The application deadline for both posts is on **17 May 2021**. Each application will be acknowledged electronically (e.g., by return email) and a unique ID number will be assigned to it. The applications will be analysed after the application deadline, and the shortlisted candidates will be invited to a teleconference interview. The selected candidates are expected to be recruited during the period **31 May 2021 - 30 November 2021**. At the end of the selection process, all the applicants will be informed of the outcome of their application by return email. Applicants interested in joining the KTH Royal Institute of Technology are invited to apply to the post KTH-1.

Further Information

For more information about the post KTH-1, please contact Dr. Gabor Fodor (gaborf@kth.se).

Disclaimer

By applying for this position, the applicants give their consent to circulate their application and personal data within the members of the consortium.

By applying for this position, the applicants declare to fulfil the eligibility requirements defined by the MSCA.

By applying for this position, the applicants agree that they will comply with the secondment plan.

By applying for this position, the applicants agree that they will comply with the planned Ph.D. enrolment.
